# Analytical Chemistry Cumulative Examination
## October 18, 2002

Attached is a copy of a paper published about 10 years ago as a "Correspondence" in Analytical Chemistry. Please critically review it as you would if it were sent to you prior to publication for review. In other words, imagine that you are going to make a recommendation either for or against publication and, if for publication, with or without revisions. As a good reviewer, you will need to give good reasons for any recommendation you make. If you recommend publication with revisions, you will need to specify what type of revisions are needed and why you think they are needed.
