ANALYTICAL CHEMISTRY CUMULATIVE EXAM

November 12, 1994

Describe in as much detail as you can the work reported in a paper published in one of the following journals, and received by our library in the last **6** months. Quality research publications are designed to address one, or at most two, main hypotheses. Make sure you have identified and described these key aspects of the publication.

Analytical Chemistry

Analytical Chimica Acta

Sensors and Actuators

Talanta

Geochimica Cosmochimica Acta

Journal of Chromatography

Journal of the Electrochemical Society

Conditions of Selection: The paper you select must deal with a topic in Analytical Chemistry. In addition, the paper chosen must <u>not</u> be one that was published by a member of your own research group.

Make sure you identify the paper as much as possible:

journal (required)

title

main authors

research group or affiliation

approximate month of appearance or page number of current issue

In addition, make a copy of the paper and put it in Liz's mailbox by 5:00 PM on Monday, November 14, 1994. It will be attached to your exam and used in its grading. (Put your SS#, <u>not</u> your name, on the copy.)
