BIOCHEMISTRY CUMULATIVE EXAMINATION

April 28, 1990

The seminar programs of the department and the biochemistry division are an integral part of your graduate education. This exam tests the attention you have paid in these programs during this academic year. Choose one seminar which has been presented during the 89-90 academic year, either a departmental seminar about a biochemical topic, or a full hour biochemistry divisional seminar (literature club not allowed) and answer the following questions. You obviously cannot describe a seminar you presented yourself.

1. (10 pts) Who was the presenter? With what institution was the presenter associated? What breed of biochemist was the presenter, i.e. an enzymologist, molecular biologist, protein chemist, etc.?

2. (5 pts) What was the title of the seminar? Paraphrase if you don't remember exactly.

3. (25 pts) What was the goal of the research described? Be as specific and detailed as possible.

4. (25 pts) What strategy was used by the researcher to achieve the goal described in the answer to question 3? Critique the strategy as to its utility in achieving the proposed goal.

5. (25 pts) What results had been achieved to reach the goal? Are they convincing? Why or why not.

6. (10 pts) What made you choose this seminar over others presented this year? Be honest in your answer.
