Inorganic Chemistry

1-27-2012

In his 2012 Union Statement, President Obama announced a blueprint for Making The Most of America's Energy Resources. Predictably, clean energy research will be boosted drastically soon.

As a chemist, you are now asked to know the basic reaction(s) below for...

1) making syngas (10');
2) making ammonia (10');
3) making methanol out of carbon (10');
4) making ferrocene catalyst (10');
5) making methanol from natural gas (10');

and to find…

6) cheaper elements that could potentially replace Li in the rechargeable batteries (10');
7) pure-element nanomaterials for developing new renewable energy technologies and economy (10');

and to develop marketable novel ideas for…

8) powering USA using whatever you can harvest from ocean (30').
