Inorganic CUME on Chalcogenides

April-8-2016

Do one of the following 2 questions.

1. Which methods below can enable you to characterize an organometallic or coordination compound? (***Choose any 5, 20 points each, and briefly explain the method's working principle or how to do that experiment***)

- FTIR
- NMR
- GC-MS
- XRD
- SEM
- Raman
- Atomic absorption
- TEM
- EPR
- UV-vis
- XPS
- CV
- AFM
- fluorescent microscope
- laser scattering

2. Which methods below can enable you to characterize an inorganic semiconducting nanomaterial? (***Choose any 5, 20 points each, and briefly explain the method's working principle or how to do that experiment***)

- FTIR
- NMR
- MS
- XRD
- SEM
- TEM
- EPR
- UV-vis
- XPS
- Atomic absorption
- CV
- AFM
- fluorescent microscope
- laser scattering
