Inorganic CUME

Jan-20-2017

Do either I or II. Don't do both I and II.

I. Which methods below can enable you to characterize an organometallic or coordination compound of your choice? **Please briefly explain "how" and "why so" for each method of your choice**. (***Choose any 5 below, 20 points each, ONLY 5 will be graded***)

1) FTIR
2) NMR
3) GC-MS
4) ICP-MS
5) XRD
6) SEM
7) Raman
8) Atomic absorption
9) TEM
10) EPR
11) UV-vis
12) XPS
13) CV
14) AFM
15) Fluorescent microscope
16) Laser scattering

II. Which methods below can enable you to characterize a coating or nanocrystal of an inorganic semiconductor? **Please briefly explain "how" and "why so" for each method of your choice**. (***Choose any 5 below, 20 points each, ONLY 5 will be graded***)

1) FTIR
2) NMR
3) GC-MS
4) ICP-MS
5) XRD
6) SEM
7) TEM
8) EPR
9) UV-vis
10) XPS
11) Atomic absorption
12) CV
13) AFM
14) Fluorescent microscope
15) Laser scattering
