Inorganic CUME

Sept-29-2017

Do either I or II.

I. Which methods below can enable you to characterize an organometallic (or coordination) compound? **Please briefly explain how and why in your answer**. (***Choose any 5 below, 20 points each, ONLY 5 will be graded***)

1) FTIR
2) NMR
3) GC-MS
4) ICP-MS
5) XRD
6) SEM
7) Raman
8) Atomic absorption
9) TEM
10) EPR
11) UV-vis
12) XPS
13) CV
14) AFM
15) Fluorescent microscope
16) Laser scattering

II. Which methods below can enable you to characterize the nanoparticles of CdSe semiconductor? **In every answer, please briefly explain how and why**. (***Choose any 5 below, 20 points each, ONLY 5 will be graded***)

1) FTIR
2) NMR
3) GC-MS
4) ICP-MS
5) XRD
6) SEM
7) TEM
8) EPR
9) UV-vis
10) XPS
11) Atomic absorption
12) CV
13) AFM
14) Fluorescent microscope
15) Laser scattering
