Organic Cumulative Exam

April 27, 1991

WORK ONLY ONE OF THE TWO CUMES BELOW.

CUME #1

Professor Bruce Lipshutz of the University of California, Santa Barbara, presented a departmental seminar on April 25, 1991. The seminar consisted of three parts which dealt with organic synthesis via organocuperate compounds. Describe, in as much detail as possible, two of the three topics. Include in your description 1) the overall transformation(s) of the organic compounds and 2) the method, including intermediate compounds, which are necessary for the transformation.

****

CUME #2

Describe a recent (within the past two months) journal article from JACS, JOC, or Tet Let which deals with synthetic organic chemistry. Describe, in as much detail as possible 1) the overall transformation(s) of the organic compounds and 2) the method, including intermediate compounds, which are necessary for the transformation. Also give the approximate name of the investigator(s), journal and month of the article.
