ORGANIC CUME, 11/30/07

Below are the MS, IR, ^{1}H NMR and ^{13}C NMRs of an unknown compound. On the following page are COSY and HETCOR spectra of the unknown. Identify the compound, interpret the indicated peaks (arrows) in the MS and IR, and use the 2D spectra to assign all resonances in both the proton and carbon NMRs. Turn in the 2D page with your test booklet, with the correlations drawn in establishing connectivities.
