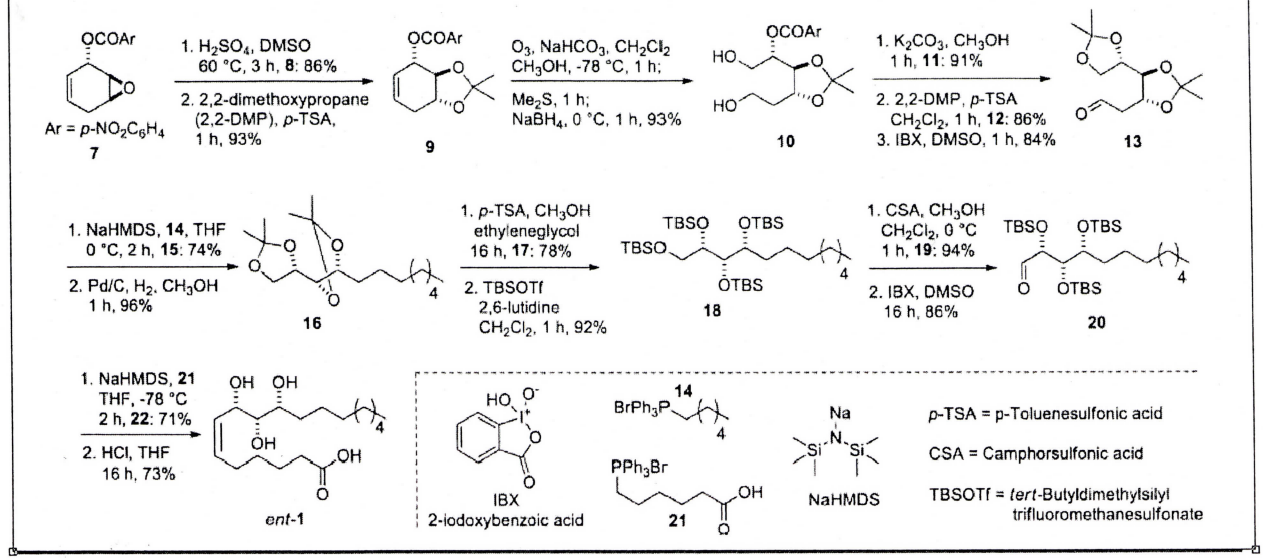
Organic Cume 11-16-2018

Scheme 3. Synthesis of (8*S*,9*S*,10*R*,6*Z*)-Trihydroxyoctadec-6-enoic Acid (*ent*-1) via Route A



Scheme 3 is taken from a recent JOC paper (*J. Org. Chem.* **2017**, *82*, 5146-5154). There are seven arrows in the scheme. Choose **FOUR** among them and write a detailed electron-pushing mechanism for each arrow of your choice. Note: there are more than one step in most of the arrows and the numbers (8, 11, 12, 15, 17, 19, and 22) are referred to the product of each step. Write the structure of the intermediate products on the arrows you choose.
